

DataBase Concept

Rajath Kiran A

June 2025

Abstract

Database is organized collection of data used to store and retrieve the data from the Data Model this Seminar Holds the Overall Summary of the databas Concept. [1]

1 Introduction

DBMS is a system software that acts as a interface between the user and the Database,using DBMS user can store,retrieve ,access the data from the database.

2 Main Content

The database models are divided into thre types

- Network Model
- Hierarchical Model
- Relational MOdel

2.1 Normalization

Normalization is the method of avoiding the Reduandancy by dividing the Complex Tables into the smaller tables.

2.2 SQL

SQL is known as structured Query Language is used to Interact with the Database through the Commands

3 Conclusion

From this You learnt the Basic of the Database and data models and About the SQL language [2].
